

FACEnetwork Technology Group

The work of the technology group focuses on dairy technology. The members of this group are dairy technologists, teachers or cheese makers. At this moment, the main topic in our group is to expand the cheese defect database. Although there is a lot of information available in textbooks and on the internet, we feel that this database can be very helpful in finding solutions for questions and problems that occur in the day to day work.

We want to build a strong network of European cheese and dairy experts, specialized in small-scale production. We would be very happy to welcome new members that want to participate actively in our group. When you are interested in joining the technology group or have any questions, don't hesitate to contact the head of the technology group, Barbara Hart (barbara@barlactica.nl).

Agenda for meeting Technology Group

October 26,

Wellbeck Estate, Nottinghamshire (UK)
